Continuation Sheet (PTOL-303)

Application No.

On pages 7-8 of the response to final office action, the applicant argues the rejection of claim 7 in substance that:

"In Hoyt, only one pipeline is accessing a return stack buffer, and thus, Hoyt's pipe has a 100% access rate to the return stack buffer. Thus, there is no need to allocate the instruction pipe's access to the external resource. Further, there is no need to determine whether immediate processing of the call instruction would exceed the instruction pipe's access allocation to the external resource."

Although, the argument has been fully considered, it has been deemed non-persuasive by the examiner for the following reason:

Applicant appears to be arguing that Hoyt does not teach lines 1-7 of claim 7. However, this argument is moot because the examiner is not relying on Hoyt to show a teaching of lines 1-7 of claim 7. Instead, the examiner has used Hennessy to provide a teaching of lines 1-7 of claim 7. Hoyt has been used to merely show a teaching of lines 8-9 of claim 7, that is, "storing a return address associated with the call instruction both locally and in a shared resource."

NOTE (from 2): The amendments made to claim 10 have generated a 112-2nd paragraph issue in claim 11. More specifically, claim 11 refers to "the new instruction" in line 2. There is a lack of antecedent basis for this limitation in the claim.
